

# Orbotix Revolutionizes Defense Solutions with Innovation and Rapid Deployment

Pioneering defense firm Orbotix introduces groundbreaking products that go from concept to battlefield deployment in mere months, setting a new standard in the industry.

VALENCIA, SPAIN

AUGUST 2024

Orbotix, a forward-thinking defense products firm, is redefining the defense industry with a unique approach that eliminates the traditional wait times associated with defense solutions. By proactively identifying battlefield challenges and privately funding their research and development, Orbotix delivers ready-to-use products a fraction of the time, ensuring that those on the front lines have the tools they need when needed.

Orbotix stands out in the defense industry with its commitment to rapid innovation and deployment. Unlike traditional defense companies that rely on customer-driven requests, Orbotix identifies and solves challenges directly from the battlefield. This proactive approach is cost-effective and significantly reduces the time from idea to deployment, ensuring that operators are equipped with cutting-edge technology when it matters most.

At the heart of Orbotix's innovation is the Autonomous Target Acquisition (ATA) System, an effective ecosystem designed to revolutionize defense operations. The ATA System leverages AI-powered autonomous flight and controls drones to approach targets automatically or manually. Capable of operating in night and denied environments, this system provides operators with rapid, actionable intelligence, ensuring precise and effective responses in diverse and challenging operational conditions.

The ATA System and our Swarm Solution with the Wasp-1 Drone work together seamlessly to lock onto targets and track them for accurate neutralization. Operators can use coordinates provided by the RECON team to launch multiple Wasp-1 drones to fly autonomously to the destination. The system ensures the target is locked and continuously tracked, making the Wasp-1 a reliable and effective tool for mission success.

Orbotix is committed to saving operators' lives by leveraging the advanced capabilities of the ATA System, which incorporates AI functionalities. In alignment with the European AI Act, Orbotix ensures that all AI-driven solutions prioritize safety, transparency, and accountability. The ATA System is developed to enhance operational efficiency while strictly adhering to ethical standards, safeguarding not only the lives of operators but also upholding the principles of responsible and secure AI usage in defense operations.

Orbotix was founded by Gregory Letare, an innovator with a military background and experience collaborating with various special forces and security teams, and Bogdan Ochiana, a former management consultant and serial entrepreneur with global experience, founded Orbotix. Their combined expertise drives Orbotix's mission to deliver rapid, innovative defense solutions that meet the urgent needs of operators on the battlefield. Together, they are committed to transforming the future of defense with a proactive, operator-focused approach.

Headquartered in Brasov, Romania, with design and engineering experts based in Valencia, Spain, Orbotix is at the forefront of developing the next generation of defense technology. The team combines global expertise in technology and real-world military experience to create innovative products. Additionally, Orbotix is set to expand its operations in Valencia with the upcoming opening of an assembly facility, further enhancing its capabilities in delivering cutting-edge solutions.

Orbotix is driving the future of Europe's defense technology by continuously enhancing product development and expanding its facilities. With a strong vision for innovation, Orbotix is poised to introduce groundbreaking products that address the evolving needs of the defense sector. The company's commitment to advancing Europe's defense capabilities ensures that its solutions meet current demands and anticipate tomorrow's challenges.
